

# STABILIZER WALKER TOMMY RUN

GALLERIA IMMAGINI

Tommy is a stabilizing walker that allows child to maintain the upright assisted position and to move independently. It was designed for use with Salera orthoses. Allows walking and exploring the environment despite the difficulties caused by the orthoses.

# DESCRIZIONE PRODOTTO

## Lightness and smoothness

Ergonomic, highly maneuverable and adjustable, it suits user needs. The idea behind Tommy is to develop a highly slim and lightweight product thanks to the use of ultra light wheels and an aluminum profile frame.

## Different size

Available in three sizes to fit user needs and growth. It's possible to insert a multi-adjustable knee support for better user positioning. There is also an electrification system that allows the use of Tommy Run via a joystick.
